Office A	tion Summary			

U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No.

Application/Control Number: 09/254,316

Art Unit: 1754

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The preambles to claims 7-14 should reflect the change to the preamble of claim 1. The 'single layer' limitation in claim 1 is unclear as to whether a monolayer of one molecule thick is meant.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 and 7-14 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The 'single layer' limitation is new matter. The limitation added is contradictory to specification pgs. 3 and 6.

Claims 1-3, 7, 8 and 11-14 are rejected under 35 U.S.C. 102(e) as being anticipated by the abstract of JP 09147916.

The abstract teaches Lithium in cellulose (or acrylic)-coated graphite. A single, thin layer is taught which appears consistent with the teaching of 0.01 % polymer in the specification. Thus, no differences are seen.

Application/Control Number: 09/254,316

Art Unit: 1754

Applicant's arguments filed 1/4/02 have been fully considered but they are not persuasive. The claims do not exclude the additional chalcogen of '916, even if it were required by the reference. Moreover, it appears to be an optional component ('is feasible', response pg. 6). The consisting essentially language limits only the 'surface active material', not the structure of the whole assembly claimed. Even if it limited the whole material, it only excludes that which is contemplated by the specification to be excluded. See specification pg. 8, which contemplates a host of additional materials.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to examiner Hendrickson at telephone number (703) 308-2539.
